

## MOVE AT THE SPEED OF BUSINESS

When DGI's experts join your team, you'll experience IT proactively managed at the speed of business plus an increase of time and resources within your organization. We'll take care of the daily operations so you can focus on contributing to your organization's core objectives through new projects and strategic initiatives.

### STAY UP TO SPEED (IN MORE WAYS THAN ONE):

#### We'll Help You Derive Business Value From Your Systems

dgi>enable will handle the tactical and strategic management of your on-prem hardware and ensure that your organization's objectives continue to be met. We'll help you get the most out of the capital investments that you've already made.

#### We'll Proactively Manage And Optimize Performance

When you engage dgi>enable, we become experts on your organization and your network. DGI will ensure your devices are always running optimally so you can focus on strategic, relevant IT.

#### We'll Be the Experts You Need

There's no doubt your IT team is capable, but it's nearly impossible (and extremely costly) to employ experts in every technology. As an extension of your team, dgi>enable allows your internal resources to become strategic contributors to the organization.

- › 24x7x365 monitoring and alerting for:
  - ›› Device availability
  - ›› Link capacity
  - ›› Network performance
- › Accounting (and real-time reporting for audit compliance) for:
  - ›› All management commands executed on network devices
